PROFILE

Product Designer with 3+ years of experience in Health InsurTech B2B SaaS, B2C, delivering AI-native end-to-end UX from discovery to code. Sole product designer for the IHX Nucleus platform, serving 22,000+ healthcare providers and 35+ payers/TPAs. Owned the UX for the cashless claim journey end to end: claim submission, reporting and analytics, underpayment intelligence, and remittance reconciliation, alongside AI workflows for ICD coding assistance, clinical document verification, and eligibility extraction. Designed and shipped 3 core products and 4 AI features across the health insurance claims lifecycle, with measurable gains in TAT, time on task, error reduction, and monetization that contributed to IHX's acquisition by Perfios (2025). Strong in UX research, interaction design, complex workflow design, design systems, integration UX, and accessibility.

EXPERIENCE

Product Designer | IHX (a Perfios company), Bengaluru Aug 2024 - Present

Sole product designer for IHX Nucleus: 22,000+ healthcare providers, 35+ payers/TPAs.

- Led the UX for 7 AI product lines across the claims journey, from submission to settlement, addressing user points of friction end to end.
- Designed premium ops features under a per-claim subscription model, including the redesigned operations dashboard and task views that cut average time to initiate settlement from 3.23 to 1.56 minutes; for one enterprise hospital contract, these premium features lifted per-claim monetization by 33% (INR 90 to 120).
- Owned design for the long-tail in-product monetization pitch flow: collaborated with network and legal teams on clickwrap agreement alignment, identified APIs for on-the-fly GST and PAN verification, and designed the subscription flow, payment and subscription info modal, and in-product tutorial sections.
- Designed the reconciliation UX as part of the claims pipeline, from pre-auth to settlement, initially for TPA credit lines.
- Grew it into the Recon Hub, a standalone module with bank statement upload and templating, UTR-level automated bank reconciliation with automatic payment-status updates on the timeline, and a reconciled-summary audit trail, now covering 100% of cashless credit lines and recovering 25 to 30% of receivables previously reconciled manually or skipped.
- Designed SettleSense.AI and QueryLens.AI, extending AI workflows into post-submission: SettleSense compared approval and settlement letters to surface shortfalls with a contest workflow for hospital finance teams, while QueryLens handled payer-query tagging, assignment, and an internal team chat UI across web and the Nucleus mobile app.
- Designed and shipped a Reports & Analytics module that automated routine reporting, saving a 2-person data team ~2 hours/week.
- Interviewed CSM, account management, and network teams to validate the problem and size ~80/day user-creation and password-reset tickets; designed the self-serve User Management module with role hierarchy, SSO, and admin-level module access control, cutting tickets to an average of 10/day and reducing CSM workload.
- Pioneered an AI-assisted prototyping workflow, connecting Figma to Claude via MCP, using VS Code, Cursor, and Claude Code in terminal, with a Design to Development to QA chain, cutting concept-to-prototype time from 10 to 15 working days to 2 to 3 days (~5x).
- Built a payer-intelligence demo and provider-platform prototypes for the Kenya and GCC markets, used in demos to Jubilee Health and Minute Health.
- Built the product prototypes used in IHX's first CxO Inner Circle Roundtables (Mumbai Jan'26, Delhi Apr'26) for enterprise hospital CXOs, supporting demo readiness for 5 roadmap items presented, 2 of which shipped to production.

Associate Product Designer | IHX, Bengaluru Jul 2023 - Aug 2024

- Led HMIS/HIS integration UX and pilot across 5+ hospitals, reducing manual data entry errors by roughly 80% and lowering average pre-auth submission time from 8.0 to 6.8 minutes.
- Owned 2FA authentication UX and GTM for 2 years as part of ISO 27001 remediation, reaching 80% of claim-active hospitals (14,920 of 22,581) and cutting reported OTP delivery issues from around 5 per day to 1 to 2.
- Built the Figma component library, reducing frontend UI development time from roughly 3+ weeks to 2 weeks per feature and improving developer handoff.
- Improved CSAT from 4.1 to 4.6 through targeted UX changes, optimized notification patterns, and enhanced error handling.

Mobile Products

- Owned end-to-end UX of a patient-facing mobile app from concept to launch, with smart lab reports, pre-authorization initiation, and health record management and sharing features aligned with ABDM M1 to M3 milestones for ABHA digital health network integration.
- Shipped a hospital-facing mobile app on a 3-week deadline giving hospital staff on-the-go access to claim status and critical case information, now at 9,500+ DAU; used its value proposition in pre-sales to drive a 33% increase in client acquisition within 2 months.

PROJECTS

Conversational AI Agent for Claim Submission | IHX Pvt Ltd

Conceptualized agentic experience for claim submission on the IHX Nucleus platform.

- Proposed reduction of pre-auth submission time from 7 minutes to under 2 minutes, eliminating form filling, improving TAT, and reducing queries.
- Modules: BenefSnap.AI, PreAuthSnap.AI, CodeRight.AI, DocuSense.AI, Smart Document Management System.AI

WiseWoman (personal project)

- Designed and built a cycle-aware AI daily planner end to end: product strategy, UX, Gemini integration, and an eval framework scoring AI outputs against a pass-fail rubric.
- Android wrapping with an engineering partner. Functional build in testing. Stack: React, TypeScript, Supabase, Gemini, Capacitor.

EARLIER CAREER

Graphic and apparel design: Tailorman, The August Co., Miss Momo, and freelance clients (2017 to 2022). Freelance UX: eCharge EV charging platform redesign with usability testing (2023).

CERTIFICATIONS, AWARDS & EDUCATION

MSc Microbiology | Vellore Institute of Technology | 2013 to 2015

Diploma in Fashion Design | JD Institute | 2017

HFI Certified Usability Analyst (CUA™) | Human Factors International | In Progress, expected September 2026

IHX Hackathon, 1st Place | IHX | Sep 2025

ADPList / Superdribbs UX Challenge, Top 3 | 2023

Product Design Launchpad | Rohan Mishra | 2023

IHX Acquisition Recognition | Multiple product improvements acknowledged during the IHX acquisition by Perfios for adoption and operational value | 2025

SKILLS

UX Design: End-to-end product design, user research and usability testing, interaction design, information architecture, prototyping, accessibility

Product Thinking: 0 to 1 product design, problem framing, onboarding funnels, retention mechanics, conversion optimization

Design Systems: Component design, token architecture, state and variant coverage, design-dev collaboration

Research & Data: Qualitative research, persona creation, behavioral analysis, hypothesis-driven iteration

AI Practice: Claude Code, Lovable, VS Code, Cursor for React prototyping, Gemini API, AI eval framework design, MCP integration

Tools: Figma, Framer, Maze, Hotjar, Balsamiq, Google Analytics, Jira, Notion, Miro, HTML/CSS (basic)

Languages: English (fluent), Hindi (fluent), Malayalam (native)
